Question No. 1

An administrator attempts an IBM Web Sphere Application Server package installation, but it fails.

What must the administrator do before making another attempt?

- **A.** Uninstall IBM installation Manager and reinstall it.
- **B.** Use Installation Manager to uninstall everything under the package, and ignore any errors.
- **C.** Delete everything in the product directory before uninstalling the package using Installation Manager
- **D.** Restore a backup copy of the previous version of the product before using Installation Manager again.

Answer: C

Question No. 2

An administrator configured Web authentication for a Web module deployed in an application server to protect the URL. After this configuration, application users could not load images that are protected on the web page.

In addition to configuring `com.ibm.wsspi.security.web.webAuthReq` as a JVM custom property, which two property values can an administrator set to resolve the problem? (Choose two.)

- **A.** lazy
- **B.** eager
- **C.** always
- **D.** transient
- **E.** persisting

Answer: D, E

Question No. 3

An administrator notices performance degradation after a new deployment of an application. After investigation, increased CPU usage is observed due to frequent GC cycles. However, there is no significant growth in the heap memory.

How can the resource consumption issue be resolved?

- **A.** Increase max heap.
- **B.** Increase perm space.
- **C.** Increase nursery size.
- **D.** Change the GC policy.

Answer: D

Question No. 4

To ensure that all web traffic is secure from the client to the application server, which two layers have to be configured for SSL? (Choose two.)

- **A.** Client to Web server
- **B.** Web server to node agent

- C. Web server to application server
- D. Application server to node agent
- E. Node agent to deployment manager

Answer: A, C

Question No. 5

What is something an administrator needs to keep on mind regarding the relationship between an IBM WebSphere Application Server install and an IBM Installation Manager install?

- A. IBM Installation Manager should be used in GUI mode.
- B. IBM Installation Manager can be uninstalled and reinstalled without impacting WebSphere Application Server
- C. IBM Installation Manager repository information points to the install location of Websphere Application Server
- D. IBM Installation Manager can be used by either a user with administrator privileges or a regular user to administer the same installation

Answer: B
