### **Question No. 1**

While an employee is on vacation, suspicion arises that the employee has been involved in malicious activity on

the network. The security engineer is concerned the investigation may need to continue after the employee

returns to work. Given this concern, which of the following should the security engineer recommend to maintain

the integrity of the investigation?

- **A.** Create archival copies of all documents and communications related to the employee
- **B.** Create a forensic image of network infrastructure devices
- **C.** Create an image file of the employee's network drives and store it with hashes
- **D.** Install a keylogger to capture the employee's communications and contacts

**Answer: D**

### **Question No. 2**

A Chief Security Officer (CSO) is reviewing the organization's incident response report from a recent incident. The details of the event indicate:

A user received a phishing email that appeared to be a report from the organization's CRM tool.

The user attempted to access the CRM tool via a fraudulent web page but was unable to access the tool.

The user, unaware of the compromised account, did not report the incident and continued to use the CRM tool with the original credentials.

Several weeks later, the user reported anomalous activity within the CRM tool.

Following an investigation, it was determined the account was compromised and an attacker in another country has gained access to the CRM tool.

Following identification of corrupted data and successful recovery from the incident, a lessons learned activity was to be led by the CSO.

Which of the following would MOST likely have allowed the user to more quickly identify the unauthorized use of credentials by the attacker?

- **A.** Security awareness training
- **B.** Last login verification
- **C.** Log correlation
- **D.** Time-of-check controls
- **E.** Time-of-use controls
- **F.** WAYF-based authentication

**Answer: E**

### **Question No. 3**

An organization's Chief Financial Officer (CFO) was the target of several different social engineering attacks recently. The CFO has subsequently worked closely with the Chief Information Security Officer (CISO) to increase awareness of what attacks may look like. An unexpected email arrives in the CFO's inbox from a familiar name with an attachment. Which of the following should the CISO task a security analyst with to determine whether or not the attachment is safe?

- **A.** Place it in a malware sandbox.
- **B.** Perform a code review of the attachment.
- **C.** Conduct a memory dump of the CFO's PC.
- **D.** Run a vulnerability scan on the email server.

**Answer: A**

**Question No. 4**

A Chief Information Security Officer (CISO) is reviewing technical documentation from various regional offices and notices some key differences between these groups. The CISO has not discovered any governance documentation. The CISO creates the following chart to visualize the differences among the networking used.

	Switch Vendor	Trunking Protocol	Minimum Cabling Requirement	Active Support
Group A	Vendor 1	802.1q	Cat 5E	YES
Group B	Vendor 1	ISL	Cat 5E	YES
Group C	Vendor 2	802.1q	Cat 5	NO
Group D	Vendor 2	802.1q	Cat 5	YES

Which of the following would be the CISO's MOST immediate concern?

- **A.** There are open standards in use on the network.
- **B.** Network engineers have ignored defacto standards.
- **C.** Network engineers are not following SOPs.
- **D.** The network has competing standards in use.

**Answer: B**

**Question No. 5**

A security architect has been assigned to a new digital transformation program. The objectives are to provide better capabilities to customers and reduce costs. The program has highlighted the following requirements:

Long-lived sessions are required, as users do not log in very often.

The solution has multiple SPs, which include mobile and web applications.

A centralized IdP is utilized for all customer digital channels.

The applications provide different functionality types such as forums and customer portals.

The user experience needs to be the same across both mobile and web-based applications.

Which of the following would BEST improve security while meeting these requirements?

- **A.** Social login to IdP, securely store the session cookies, and implement one-time passwords sent to the mobile device
- **B.** Create-based authentication to IdP, securely store access tokens, and implement secure push notifications.
- **C.** Username and password authentication to IdP, securely store refresh tokens, and implement context-aware authentication.
- **D.** Username and password authentication to SP, securely store Java web tokens, and implement SMS OTPs.

**Answer:** A
